

Teflon™ Primers for Fluoropolymer Coatings

Necessary for proper adhesion, increased durability, and additional substrate protection.

Product Overview

Teflon™ primers are an effective way to prepare a surface before coating is applied. Primers ensure proper adhesion, increase durability, and give additional protection to the substrate. With the use of our primers, the coating is given a smooth surface to bind to, which creates a more protective layer. This additional layer decreases porosity of the coating to the substrate.

Primer Guide

Primer	Color	FDA	Carrier	PTFE	PFA	FEP	ETFE
420G-703	Black	Yes	Solvent		✓	✓	
420G-717	Red	Yes	Solvent		✓	✓
